

**Trash Free Waters/Urban Waters/NEP Integration Proposal**  
Santa Monica Bay Clean Bay Certified Restaurant Source Reduction Program

Every year an estimated 8 million tons of plastic are discharged into the world's oceans ([Scientific American](#)) - 10 metric tons of this plastic comes from the Los Angeles area, daily ([Center for Biological Diversity](#)). Up to two-thirds of marine debris cataloged on beaches comes from single-use, disposable plastic packaging from food and beverage-related goods and services ([EPA](#)). With roughly 50 percent of plastic being used only once and then disposed of, a tremendous opportunity for source reduction and plastic pollution prevention is presented ([EcoWatch](#)).

The Santa Monica Bay National Estuary Program (SMBNEP) will address marine debris through a two-pronged approach. First, through its existing Clean Bay Certified (CBC) Restaurants Program will engage participating restaurants to reduce single-use plastic items. Second, SMBNEP will work with one Santa Monica Bay Watershed city to analyze volumetric trash data that will serve to, simultaneously, define the impact that plastic bag and EPS bans have had on the environment and target locations for where SMBNEP's plastics reduction program will make the biggest impact.

The SMBNEP has a strong relationship with 450 restaurants in the Santa Monica Bay Watershed through CBC. We work with 11 cities (Malibu, Santa Monica, Culver City, Inglewood, Manhattan Beach, Redondo Beach, Hermosa Beach, Torrance, Rancho Palos Verdes, Rolling Hills Estates, and Palos Verdes Estates) to inspect and certify restaurants that voluntarily implement initiatives to reduce stormwater pollution and protect the environment. Our established partnerships with cities and restaurants provides a solid foundation to implement our source reduction program. Specifically, SMBNEP staff will work with CBC cities to obtain trash data from stormdrain and Continuous Deflector Separation (CDS) unit cleanouts and, if available, street sweeping, which will help identify high trash generation zones. Restaurants located within these zones will be selected for program engagement.

**Dollar amount requested:** \$45,000.00 (scalable upon request); Grant #: CE-99T51301

**Mandatory Criteria:**

1. This project is integrating TFW in a NEP CCMP study area.
2. The money will be reprogrammed into the Santa Monica NEP's Clean Water Act 320 FY 2017 grant.

**Non-mandatory Criteria:**

1. **Tech Transfer/Info Sharing:** SMNEP will engage businesses and cities in the watershed. Presentations will be made to the NEP governing board as well as the national NEP tech transfer meeting.
2. **Transferability:** the products developed under this project as well as the lessons learned could be transferred to other geographic areas in both the Los Angeles area and other coastal watersheds. A similar project was completed in the San Francisco Bay Area.
3. The project is already in the NEP's work plan, but was underfunded.
4. The project is in one of the 10 areas described by Emma Maschal on the last TFW call.
5. This project is focused on source reduction a.k.a. trash prevention.
